

CORYNOMORPHA PRISMATICA, A NEW RHODOPHYTE RECORD FOR THE PERSIAN GULF AND THE GULF OF OMAN

J. Sohrabipour & R. Rabei

Sohrabipour, J. & Rabii, R. 2006 01 01: *Corynomorpha prismatica*, a new Rhodophyte record for the Persian Gulf and the Gulf of Oman. -Iran. Journ. Bot. 11 (2) :155-157. Tehran.

Corynomorpha prismatica (J. Agardh) J. Agardh (*Corynomorphaceae-Florideophyceae*) is reported from the intertidal of Bandar Lengeh (Hormozgan province) in the Persian Gulf and Bandar Chabhar (Sistan and Baloochestan province) in the northern Gulf of Oman. The species is a new record for both the Persian Gulf and the Gulf of Oman.

Jelveh Sohrabipour & Reza Rabei, the Agriculture and Natural Resources Researches Center of Hormozgan, province, Bandar Abbas, 79145-1577, Iran.

گونه گزارش جدیدی از جلبکهای قرمز برای خلیج فارس و خلیج عمان
جلوه سهرابی پور و رضا ربیعی

گونه گزارش جدیدی از جلبکهای قرمز خانواده *Corynomorpha prismatica* (J. Agardh) J. Agardh برای نخستین بار از مناطق جزر و مدي بندر لنگه در استان هرمزگان و بندر چابهار در شمال دریای عمان واقع در استان سیستان و بلوچستان و در جنوب شرقی ایران بعنوان گونه رکورد جدید برای فلور جلبکی خلیج فارس و خلیج عمان گزارش می‌گردد.

Introduction

In the course of a study on the marine algal flora of southeastern Iran, *Corynomorpha prismatica* (J. Agardh) J. Agardh was collected from intertidal rock pools at Bandar Chabhar ($25^{\circ} 17' N / 60^{\circ} 30' E$) and Bandar Lengeh ($26^{\circ} 47' N / 55^{\circ} 17' E$).

A review on all published literature on marine algae of the Persian Gulf and the Iranian part of the Gulf of Oman (Al-Hassan & Jones, 1989 ; Basson et al. 1977; Basson 1979_a and 1979_b; Basson 1992; Børgesen 1939; De Clerck & Coppejans 1996; Endlicher & Diesing 1845; Jones 1986; Nizamuddin & Gessner 1970; Sohrabipour & Rabii 1996 & 1999) revealed that the species has not been reported from the Persian Gulf and the Gulf of Oman previously. The specimens are preserved in the herbarium of Research Centre of Agricultural and Natural Resources of Hormozgan province.

Corynomorpha prismatica (J. Agardh)

J. Agardh

Balouchistan: Bandar Chabhar, 25.10.1999, Sohrabipour, Rabei & Hasanpour 11165. – Hormozgan: Bandar Lengeh, 42 km toward East, 29.4.2002, Sohrabipour, Rabei and Khosravifar 2274.

Plants 5-15 cm high, purple to dark brown in color, cartilaginous, terete, up to 5 mm in diameter, generally unbranched but sometimes dichotomously branched in the upper parts, discoid holdfast, tetrasporangial nemathecia create a terminal capitulum of 1-2 cm. Transverse section of branches showed a medulla of anastomosed filaments and stellate cells with a cortex composed of anticlinal rows of dichotomous filaments (Fig. 1). Plants grow aggregated and form patches on coral reefs at the sublittoral fringe.
